```
In [1]:  #Question 1
         s=input("Give me a string: ")
         print(s.upper())
```

Give me a string: arsh saxena
ARSH SAXENA

```
In [3]:  #Question 2
         a=input("Give me a string: ")
         h=""
         for i in a:
             h+=i.upper()
         print(h)
```

Give me a string: arsh saxena
ARSH SAXENA

```
In [13]:  #Question 3
          s1=("Hey there! My name is Arsh.")
          s2=input("What to check? ")
          if s2 in s1:
              print("It is a substring of s1.")
          else:
              print("It is not a substring of s1.")
```

What to check? Arsh
It is a substring of s1.
